

Chemicals, Manufacturing & Materials Science

From organic chemistry and polymers, manufacturing and automation, to metallurgy and materials science, the lawyers at Lewis Roca Rothgerber Christie have an impressive depth and breadth of expertise along with a broad array of technical backgrounds and experience to develop intellectual property and business transaction strategies that are individualized to our clients' particular business and legal needs.

Understanding the unique issues faced for protecting and exploiting technology, our professionals routinely anticipate these issues and craft creative and effective means for addressing them. Being mindful of unique issues facing manufacturers is a key element to our lawyers being able to provide effective guidance in the intellectual property, corporate and real estate arenas.
