

Chemicals & Polymers

Increased commercialization and the rise of new global customers are transforming the chemical and polymer industry. To keep pace, companies are looking to improve product lines—possibly through mergers and acquisitions—update business models, determine growth opportunities, and leverage digital technologies to improve productivity and efficiency.

Our attorneys have the expertise to guide you through these challenges. Recognizing the unique issues and many nuances in this space, we routinely craft creative and effective means to address them for clients. From intellectual property protection to financing, from regulatory compliance and contracting to mergers and acquisitions... we support clients in every area of their business.

Because we have attorneys with the education and experience to understand the unique needs of the industry, and expertise in other related areas of business, we understand the nuances of working with organic and inorganic compounds, semiconductors, photovoltaics, heat transfer devices, alloys, batteries, OLEDs, coatings, adhesives, catalysts, zeolites, pharmaceuticals, chemical reagents and building blocks, and enzymes, among other areas.
